EXPERIENCE

Robert Guild Associates Inc.

Aug 2024 - Present

Software Engineer

Doha, Qatar

- Applied systems design and systems analysis to independently architect and deliver two production applications using Node.js/Express and MongoDB, and a database management system supporting five operational domains at Hamad International Airport.
- Engineered shared REST APIs and applied schema design concepts to MongoDB data models connecting two applications across service requests, preventive maintenance, reporting, attendance, RCA, and PAS asset workflows.
- Built production features including JWT authentication, role-based access control, rate limiting, Telegram/email automation, and automated PDF/Excel generation.
- Architected and shipped an enterprise Document & Inventory Management System using modern programming languages to support four core business-document workflows: quotations, invoices, purchase orders, and delivery notes.
- Automated five preventive-maintenance frequencies alongside corrective maintenance, Root Cause Analysis (RCA), reporting, and workflows previously handled manually.

PROJECTS

Airport Operations Management Platform

- Designed a shared backend architecture connecting three deployed applications across five operational domains, using a hierarchical schema spanning locations, control rooms, controllers, and field devices.
- Engineered SHA-256 secured QR workflows, five preventive-maintenance frequencies, eight PAS device classes, role-based access control, RCA workflows, and automated reporting.

Enterprise Document Management System

- Built a production document platform supporting four generated document types with JWT authentication, role-based permissions, full-text search, PDF previews, and bulk workflows.
- Reduced document lookup time by 30% by engineering automated PDF generation, document tracking, inventory integration, and bulk export APIs with Express.js and MongoDB.

Dealership & Workshop Management System

- Built a two-mode dealership and workshop desktop platform managing vehicles, customers, sales, service, payments, cheques, contracts, accounts, parts, and employees.
- Implemented six financial and operational report types with PDF/CSV export, server-enforced RBAC, audit logging, secure authentication, and automatic receipt generation.
- Directed AI coding tools through architecture, implementation, debugging, and refactoring using detailed technical constraints and iterative validation.

SKILLS

Languages: JavaScript/TypeScript, Python, Java, C#, SQL, HTML/CSS, Modern Programming Languages

Frameworks: React, React Native, Angular, Node.js, Express.js, Electron, Tailwind CSS, Front-end Development, Back-end Development

AI Development: Claude, ChatGPT, GitHub Copilot, AI coding agents, context engineering, agentic development workflows, rapid prototyping, AI-assisted debugging and refactoring

Data & Libraries: MongoDB, PostgreSQL, SQLite, Mongoose, Axios, pdf-lib, Schema Design, Database Management System

Tools: Git, Docker, Postman, Linux, AWS, MongoDB Atlas, Vercel, Fly.io, Figma, Operating Systems

Microsoft Technologies: .NET, ASP.NET Core, Visual Studio

Systems Analysis & Design: Systems Analysis, Systems Design

EDUCATION

McMaster University

Sep 2024 - Present

Bachelor of Technology, Software Engineering (Co-op)

Hamilton, ON

George Brown College

Sep 2021 - Apr 2024

Advanced Diploma, Computer Programming Analysis

Toronto, ON
