EDUCATION

McMaster University

Bachelor of Technology in Software Engineering (Co-op)

Sep. 2024 – Present

Hamilton, ON

George Brown College

Advanced Diploma in Computer Programming Analysis

Sep. 2021 – Apr. 2024

Toronto, ON

EXPERIENCE

Software Developer

Robert Guild Associates Inc.

Aug. 2024 – Present

Doha, Qatar

- Architected and independently delivered an enterprise, three-application maintenance platform (React, Node.js/Express, MongoDB) powering live Qatar Duty Free operations at Hamad International Airport across shift reporting, service requests, and preventive maintenance.
- Owned end-to-end delivery of authentication, role-based access control, automated Telegram and email notifications, and PDF/Excel reporting for airport maintenance operations.
- Delivered the enterprise Document & Inventory Management System (DMS), centralizing document lifecycle management — creation, secure storage, and retrieval — for procurement, service, and financial records on live airport projects.
- Designed and shipped the company's public-facing website, automating lead capture, project filtering, and client contact workflows to support enterprise business development.

Mobile App Developer

Metawebworks

Sep. 2023 – Apr. 2024

Toronto, ON

- Engineered a cross-platform mobile application in React Native to track and analyze customer interactions, delivering actionable business insights.
- Partnered with a team to design intuitive UI/UX prototypes in Figma, ensuring seamless navigation and responsiveness.
- Participated in Agile sprint planning, defining user stories and delivery timelines to ship features on schedule.

PROJECTS

Airport Operations Management Platform | *React, Node.js, MongoDB, Tailwind CSS*

- Architected the shared REST API and MongoDB schema integrating three applications around a hierarchical equipment topology of locations, control rooms, controllers, and devices.
- Secured the public QR intake flow with SHA-256 hashed tokens and rate limiting, enforcing role-based access control internally.
- Centralized preventive and corrective maintenance operations by engineering PPM scheduling, Root Cause Analysis (RCA), and automated monthly reporting workflows.

Enterprise Document Management System (DMS) | *React, Node.js, MongoDB, AWS, Tailwind CSS*

- Secured the DMS with JWT-authenticated sessions and role-based access control, managing hardware, procurement, and financial records for live airport projects.
- Reduced document lookup time by 30% by engineering indexed, full-text search with instant previews.
- Engineered a scalable Express.js/MongoDB backend integrating pdf-lib to automate secure PDF generation and bulk document export APIs.

Robert Guild Associates Website | *React, Node.js, TailwindCSS*

- Developed a responsive corporate website showcasing enterprise AV solutions, with automated lead capture, project filtering, and Nodemailer-driven contact workflows.
- Boosted site performance and usability through lazy loading and cross-device optimization.

TECHNICAL SKILLS

Languages: JavaScript/TypeScript, Java, Python, C#, SQL, HTML/CSS

Frameworks: React, React Native, Angular, Node.js, Express.js, Tailwind CSS

Libraries: pdf-lib, Axios, Mongoose

Tools: Git, Docker, MongoDB Atlas, Postman, Linux, Figma, Vercel, Fly.io, AWS
